AI / Software Engineering Skills

- **AI & LLM:** LLM application development, AI-native product features, AI agents, Claude, GPT, prompt engineering, AI-assisted software development
- **Languages & Frameworks:** Python, TypeScript, JavaScript, Node.js, NestJS, React, React Native
- **Distributed Systems:** Kafka, Confluent Kafka, event-driven microservices, API design, REST APIs
- **Healthcare & Data:** FHIR clinical events, EHR systems, clinical workflows, MongoDB, BigQuery, PostgreSQL
- **Cloud & Infrastructure:** GCP, AWS, Google Cloud Functions, GCP API Gateway, GitHub, GitLab, Datadog
- **Engineering:** Full-stack development with backend emphasis, technical architecture, system design, automated testing, E2E testing with Playwright, code review

Experience

Akido | Senior Software Engineer

June 2025 -- Present

- Developed features for an AI-native healthcare platform, integrating LLM capabilities into core product workflows including AI-generated clinical note templates, automated transcription-to-task pipelines, and intelligent after-visit summary generation --- reducing physician documentation time and enabling clinical decision support at the point of care.
- Architected and delivered a Kafka-based event-driven microservice processing FHIR clinical events across 5+ source systems (Capella, Dynamics, Quickbase, Dataverse) to automate prior authorization workflows --- cutting turnaround time for the auth team, eliminating manual data entry, and building the real-time data infrastructure that underpins downstream AI/ML features.
- Led full-stack feature delivery for a greenfield EHR platform, owning the complete lifecycle --- from technical design and API contracts through Kafka consumers, backend services, and React UI --- while managing the transition of clinical teams from legacy systems and shipping 35+ epics across vitals, labs, scheduling, and task management domains.
- Accelerated development velocity 3x by embedding AI agents (Claude, GPT) across the entire SDLC --- using LLMs for architectural planning, code generation, test authoring (unit + E2E Playwright), code review, debugging, and release QA --- establishing AI-augmented engineering practices that reduced cycle time from weeks to days on complex, multi-service features.

Boom Entertainment | Senior Software Engineer

April 2021 -- March 2025

- Developed a casino games operator that revolutionized company operations, architecting TypeScript libraries, Keycloak authentication, and GCP API Gateway in full compliance with National Indian Gaming Commission and state regulatory requirements.

- Increased users of Boom's proprietary app by 1.6 million by managing migration of an acquired app's user base. Created MongoDB collections and Kafka events, integrated app-specific configurations, and built a custom migration script that decreased migration time from several days to a few hours.
- Accelerated development of complex data infrastructure by leveraging AI to generate and refine sophisticated SQL queries and Python ETL pipelines, building automated hourly reporting for revenue, profit and loss, and customer acquisition costs with Google Cloud Functions, Apache Beam, Apache Airflow, event tracking, and BigQuery - saving hundreds of developer hours per month and reducing deployments.
- Informed executive business decisions by automating data aggregation into hourly updated Tableau charts of active user retention, entry counts, user engagement, cash balances, and other business metrics for the analytics team and CFO.
- Saved the sports division significant losses from entry and deposit fraud by automating Slack alerts using Python Google Cloud Functions and Kafka event tracking.

Boom Entertainment | Software Engineer II

April 2021 -- March 2025

- Built a Node.js backend microservice handling cash and points transactions for withdrawals and payments to Boom's Daily Fantasy Sports app, which collected over \$100,000 in entries in one day just four months after launch.
- Helped Boom's free-to-play apps reach 1 million active monthly users by launching a new JSON event-tracking system that reduced costs and streamlined the company's use of Confluent Kafka.
- Developed an interactive ranking system for more than 500,000 users, the primary new feature of Tim Horton's NHL Hockey Challenge for the 2021--22 season.
- Expanded Boom's Daily Fantasy Sports footprint by integrating with 8am Golf's Chirp app for the PGA.
- Built infrastructure, fixed frontend and backend bugs in React Native, added features critical to gameplay, reworked question scoring, and integrated player statistics from Sportradar, a third-party live data source.

WCG Trifecta Clinical | Lead Mobile Engineer

September 2019 -- April 2021

- Led an Agile team of engineers and delivered iOS and Android builds to the Apple App Store and Google Play Store.
- Improved customer satisfaction for a \$23 billion pharmaceutical client by developing new features and rewriting outdated code for the mobile version of the company's software.
- Convinced management to rescue a critical mobile project by demonstrating coding ability, a history of meeting SDLC deadlines, and a successful overhaul of the app's UX and responsiveness.
- Collaborated cross-functionally with developers, QA testers, and database engineers using Git and Jira.

Education

- **California State University, East Bay** --- Bachelor's Degree, *Summa Cum Laude*
- **San Francisco State University** --- Certificate in Technical Writing
- **Patten University** --- Mathematics Teaching Credential
